QuickBuild Delivery Update

The first container with RV-10 QBs is loaded and at the port in the Philippines. It should sail within the next couple days! We'll be contacting those customers whose orders will be filled when this container arrives to inform them of an expected delivery date. Additional RV-10s are being built up now and we expect additional shipments in the coming weeks.

All of our backordered RV-10 control surfaces are also on this first container. Those of you awaiting flaps or ailerons from previously delivered RV-10 QBs will be receiving those just as soon as this container arrives and we turn them around. It normally takes about 4 weeks for a container to make it from the Philippines to Van's.

We're still frustrated with the logistics on the two-place QBs (RV-7/7A, -8/8A and -9/9A). It seems like every time we jump through what we think is the last bureaucratic 'hoop', another pops up to replace it. We are really hoping to see the two-place RVs following close behind the RV-10s but until they are actually on the water, we can only speculate. We know our customers are as frustrated as we are and we apologize for the long delays some of you have endured. We are still very optimistic that there will be two-place RVs moving soon. We'll be sure to keep you informed of any new developments.

Once again, thanks for your patience and understanding.

Scott Risan
